

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (original) A resin composition containing an epoxy resin and a photo-radically curable resin, characterized by containing a triphenylmethane-based leuco pigment represented by formula (1):

2. (original) The resin composition according to claim 1, wherein the triphenylmethane-based leuco pigment is 4,4',4''-tris(diethylamino)triphenylmethane, that is the structure represented by formula (1) wherein $n=2$.

3. (currently amended) The resin composition according to claim 1 ~~or 2~~, wherein the photo-radically curable resin contains a compound having a radically polymerizable unsaturated double bond, and a photo-radical polymerization initiator.

4. (currently amended) A method of confirming the history of photoirradiation to a resin composition according to claim 1 ~~any one of claims 1 to 3~~, comprising the step of changing color by irradiation of light to the resin composition.

5. (original) A triphenylmethane-based leuco pigment represented by formula (1):

,provided that bis(4-diethylaminophenyl)-4-N,N-dipropylaminophenylmethane is excluded.

6. (original) 4,4',4''-tris(diethylamino)triphenylmethane.

7. (new) The resin composition according to claim 2, wherein the photo-radically curable resin contains a compound having a radically polymerizable unsaturated double bond, and a photo-radical polymerization initiator.

8. (new) A method of confirming the history of photoirradiation to a resin composition according to claim 2, comprising the step of changing color by irradiation of light to the resin composition.

9. (new) A method of confirming the history of photoirradiation to a resin composition according to claim 3, comprising the step of changing color by irradiation of light to the resin composition.

10. (new) A method of confirming the history of photoirradiation to a resin composition according to claim 7, comprising the step of changing color by irradiation of light to the resin composition.
